“Angular momentum and tensor operators”, 5p
Course evaluation

Please answer the questions below. Your opinions will help me improve the course for next year. The completed “course evaluation” form (not signed) can be put in my mailbox outside Dept. of Physics. Thanks!

What is your overall opinion about the lectures?

What was good?

What was not good and how should this be improved?

Did you read the recommended course literature? If so, specify.

Is it good to hand out the “Lecture notes” as was done this year? Explain why/why not.

How should the “Lecture notes” be improved?

Did the course cover the topics you expected? If not, please exemplify.
